APPLIED NUMERICAL MATHEMATICS

Author Index—Volume 20 (1996)

(The issue number is given in front of the page numbers)

Abia, L.M., J.C. López-Marcos and **J. Martínez**, Blow-up for semidiscretizations of reaction–diffusion equations (1–2) 145–156
Ashby, S.F., S.L. Lee, L.R. Petzold, P.E. Saylor and **E. Seidel**, Computing spacetime curvature via differential algebraic equations (1–2) 221–234

Berzins, M. and **J.M. Ware**, Solving convection and convection–reaction problems using the method of lines (1–2) 83– 99
Bey, K.S., J.T. Oden and **A. Patra**, A parallel *hp*-adaptive discontinuous Galerkin method for hyperbolic conservation laws (4) 321–336
Biswas, R. and **R.C. Strawn**, Mesh quality control for multiply-refined tetrahedral grids (4) 337–348
Blom, J.G., see **Verwer, J.G.** (1–2) 191–209
Brezinski, C., Extrapolation algorithms and Padé approximations: a historical survey (3) 299–318
Burrage, K., C. Dyke and **B. Pohl**, On the performance of parallel waveform relaxations for differential systems (1–2) 39– 55
Butcher, J.C., A history of Runge–Kutta methods (3) 247–260

Chrisochoides, N., Multithreaded model for the dynamic load-balancing of parallel adaptive PDE computations (4) 349–365
Chui, C.K. and **J. Lian**, A study of orthonormal multi-wavelets (3) 273–298

Dempsey, K.M. and **I. Gladwell**, Numerical instability in the breathing-mode dynamics of elastic rings (1–2) 211–220
Devine, K.D. and **J.E. Flaherty**, Parallel adaptive *hp*-refinement techniques for conservation laws (4) 367–386
Dillon, R.H., see **Moore, P.K.** (1–2) 117–128
Dyke, C., see **Burrage, K.** (1–2) 39– 55

Elmer, C.E. and **E.S. Van Vleck**, Computation of traveling waves for spatially discrete bistable reaction–diffusion equations (1–2) 157–169

Flaherty, J.E., see **Devine, K.D.** (4) 367–386

Gladwell, I., see **Dempsey, K.M.** (1–2) 211–220

Hosea, M.E. and **L.F. Shampine**, Analysis and implementation of TR-BDF2 (1–2) 21– 37
Huang, W. and **R.D. Russell**, A moving collocation method for solving time dependent partial differential equations (1–2) 101–116
Hundsdorfer, W., see **Verwer, J.G.** (1–2) 191–209

Jackson, K.R., The numerical solution of large systems of stiff IVPs for ODEs (1–2) 5– 20

Kallinderis, Y., A 3-D finite-volume method for the Navier–Stokes equations with adaptive hybrid grids (4) 387–406

Lee, S.L., see **Ashby, S.F.** (1–2) 221–234
Lian, J., see **Chui, C.K.** (3) 273–298
López-Marcos, J.C., see **Abia, L.M.** (1–2) 145–156

Maly, T. and **L.R. Petzold**, Numerical methods and software for sensitivity analysis of differential-algebraic systems (1–2) 57– 79
Martínez, J., see **Abia, L.M.** (1–2) 145–156
Moore, P.K. and **R.H. Dillon**, A comparison of preconditioners in the solution of parabolic systems in three space dimensions using DASPK and a high order finite element method (1–2) 117–128

Nowak, U., A fully adaptive MOL-treatment of parabolic 1-D problems with extrapolation techniques (1–2) 129–141

Oden, J.T., see **Bey, K.S.** (4) 321–336
Oliger, J. and **X. Zhu**, Stability and error estimation for component adaptive grid methods (4) 407–426

Patra, A., see **Bey, K.S.** (4) 321–336
Petzold, L.R., see **Maly, T.** (1–2) 57– 79
Petzold, L.R., see **Ashby, S.F.** (1–2) 221–234
Pohl, B., see **Burrage, K.** (1–2) 39– 55

Quirk, J.J., A parallel adaptive grid algorithm for computational shock hydrodynamics (4) 427–453

Russell, R.D., see **Huang, W.** (1–2) 101–116

Saylor, P.E., see **Ashby, S.F.** (1–2) 221–234
Schiesser, W.E., PDE boundary conditions from minimum reduction of the PDE (1–2) 171–179
Seidel, E., see **Ashby, S.F.** (1–2) 221–234
Shampine, L.F., see **Hosea, M.E.** (1–2) 21– 37
Strawn, R.C., see **Biswas, R.** (4) 337–348

Taha, T.R., Inverse scattering transform numerical schemes for nonlinear evolution equations and the method of lines (1–2) 181–187

Van der Houwen, P.J., The development of Runge–Kutta methods for partial differential equations (3) 261–272
Van Vleck, E.S., see **Elmer, C.E.** (1–2) 157–169
Verwer, J.G., J.G. Blom and **W. Hundsdorfer**, An implicit–explicit approach for atmospheric transport-chemistry problems (1–2) 191–209

Ware, J.M., see **Berzins, M.** (1–2) 83– 99

Zhang, W., Using MOL to solve a high order nonlinear PDE with a moving boundary in the simulation of a sintering process (1–2) 235–244
Zhu, X., see **Oliger, J.** (4) 407–426
